Santiago

Personal Projects

WCA Notification System

- Automated notification system for World Cube Association (WCA) competitions. Built with Python and deployed via GitHub Actions, it monitors the WCA API every 2 hours and sends instant notifications through Discord webhooks and Telegram bot when new competitions are announced in Chile. Features include multi-platform notifications, automatic state management using JSON files persisted via GitHub Actions, and rich formatted embeds with detailed competition information.

Languages

- Spanish, native
- English, B2 level
